

## LCN as an alternative to Linatex

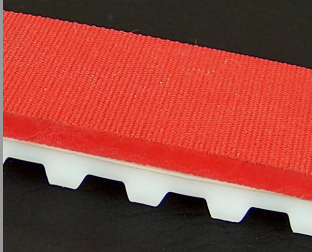

We noticed that:

- Linatex does not show always the same quality
- Linatex can be processed badly
- Linatex is sensitively to pressure and temperature

Not a few customers think only on Linatex if they see a red rubber.

We advice LCN as an alternative to Linatex because:

- LCN has constantly high-quality
- LCN can be processed better
- LCN has a higher mechanical strength with good abrasion resistance

	Linatex	LCN
		
Material	natural- caoutchouc	natural- caoutchouc
Colour	red	red
Hardness	app. 40°Sh ± 5°Sh	app. 45°Sh ± 5°Sh
Temperature	-40°C to +70°C	-30°C to +80°C

At Norditec LCN can be applied, as well as Linatex, by glue or seamless by vulcanisation.

The applications of LCN- coating are the same like the applications of a Linatex- coating.
